The Data Mapping tool allows linking to an existing database with the same schema as the drawing. This enables developers to use methods familiar to other database development techniques, and there are tools available to make the conversion of the data to the drawing in code as simple as possible. The idea is to be able to create data models in a database schema, such as a structured query language (SQL) database, and have the AutoCAD drawing component read the data and generate the drawing in response to queries on that data model.
