## What's New In?

Description : Target is an accounting software that handles work management and generate financial reports. Besides our Standard modules of Target we can also provide user specific solution and link it with our Accounting software. Q: Sending document to server with multiple files and have them saved in the background I am trying to figure out how to send multiple files, not just one, from the iOS app to the server and have the files saved in the background while the main app is still running. I have a table view and when a user selects a row, the app goes to a new screen with a file picker. I have managed to figure out how to display a file picker and the file can be selected, but how can I have that file saved on the server? I have a server setup with a cgi script that is called by a line of php code in the app. This is how I am setting up the document: `NSString *cachedDocumentPath = [NSHomeDirectory() stringByAppendingPathComponent:[NSString stringWithFormat:@"%d.xml", dataId]]; //NSString *cachedDocumentPath = [NSHomeDirectory() stringByAppendingPathComponent:[NSString stringWithFormat:@"%d.xml", dataId]]; NSString *cachedDocumentPath = [[[NSString alloc] initWithFormat:@"%d.xml", dataId] autorelease]; NSData *cachedData = [NSData dataWithContentsOfFile:cachedDocumentPath]; [cachedData writeToFile:cachedDocumentPath atomically:YES];` Is there a way to do this? I would really appreciate some help on this! Thank you, Jade A: You should be able to just save the documents to your Documents directory and have the server handle them. You can use `dataWithContentsOfFile:documentPath:error:` to do the file saving. You can use the NSURL classes to figure out if the document is already saved and get its fileURL for you.

Introduction {#sec1-1} ===== Wilson's disease (WD) is a rare autosomal recessive disorder with symptoms including copper accumulation in the liver and brain. Clinical diagnosis of WD is based on history, clinical findings, laboratory investigations, and genetic testing. The most common symptoms include hepatic and neurological symptoms. Cardiac abnormalities are often present. The diagnosis is based on the clinical triad of jaundice, hepatosplenomegaly, and Kayser--Fleischer ring \[@ref1\]. Liver biopsy is used for definite
