Import and incorporate feedback in just one click. You can import and incorporate feedback from printed paper or PDFs, and then automatically send your changes back to the originator, eliminating the need for additional drawing steps. To implement the new features in AutoCAD 2023, version 3.0.1 is required. Single click annotations in the Library In previous versions, you could add comments or annotations to parts of your drawing on the fly using the "+Annotation" command. In AutoCAD 2023, you can also make comments and annotations to selected parts of your drawings using the AutoCAD "Properties" window. You can do this by selecting the piece, or by selecting it in the Project Browser. When you select a piece, you can use one of the following commands to make annotations. Note: For More information about Annotations, click here. Create surface annotations In addition to making comments and annotations to existing parts of your drawing, you can also create custom surfaces for the parts of your drawing. Surface annotations let you create a single surface for the entire component, or for all components of the drawing. You can also create different types of surfaces for your components. For example, you can specify a single plane, or a single axis, which would create a flat surface for each part. You can also specify a textured surface, which would display a more realistic visual surface for each part. You can also use surface annotations to quickly annotate different regions of your drawing. For example, you can use surface annotations to annotate parts of a drawing with text. How to: Select one or more pieces in the Project Browser. Choose "Properties" from the selection context menu. Click "Surfaces". Select "Create new surface". Use the following to specify the type of

surface. Surface type: A Surface is a graphical surface for the selected component. You can also use a surface to show the label of a drawing component. Use “Edit” to edit a surface, or “Copy” to copy it. Make new surfaces for selected parts of the drawing. When you finish editing a surface, a new annotation is added to the drawing.
