Before I show you that, here is a quick summary of AutoCAD: AutoCAD is a 2D/3D CAD software application which works with many types of digital media such as; paper, graphics, animation, and video. It supports most of the major industry standard file types (DGN, DXF, DWG, PDF, AFP, and UHD) and it can import and export to other file types. It allows users to design, create, and modify 2D drawings, project, or architecture drawings, as well as 3D models. Additionally, the latest release of AutoCAD supports the ability to edit AutoCAD files in Windows. AutoCAD 2020 runs on most Windows operating systems such as; Windows XP, Windows 7, Windows 8, Windows 10, Windows Vista, and Windows 8.1. There are two editions of AutoCAD: Standard and Professional. AutoCAD Standard: This is the entry level version of AutoCAD and offers the following features: It supports drawing objects and editing features such as; editable drawing grids, adding annotations to drawing, re-sizing, shifting, rotating, and drawing dimensions. It is free and does not support 3D models. AutoCAD Professional: This is the professional version of AutoCAD which comes with the following features: It supports 3D models It allows for the creation of 3D animations It is free to use but does not allow the editing or modification of drawings You can check the AutoCAD 2020 price in our article on AutoCAD 2019 prices. Q: Does the function $f(x) = \ln x + \frac{1}{x}$ converge or diverge in $\mathbb{R} \setminus \{0\}$? Does the function $f(x) = \ln x + \frac{1}{x}$ converge or diverge in $\mathbb{R} \setminus \{0, \infty\}$? I know that $f(x)$ diverges as x tends to infinity because $\lim_{x \rightarrow \infty} f(x) = \lim_{x \rightarrow \infty} \ln x + \lim_{x \rightarrow \infty} \frac{1}{x} = \infty$. But what about $x \rightarrow 0$? $\lim_{x \rightarrow 0} \ln x = -\infty$ and $\lim_{x \rightarrow 0} \frac{1}{x} = \infty$. So as $x \rightarrow 0$ we have $\lim_{x \rightarrow 0} f(x) = \lim_{x \rightarrow 0} \ln x + \lim_{x \rightarrow 0} \frac{1}{x} = -\infty + \infty$. Is this correct? A: Yes, but you only know what $\lim_{x \rightarrow \infty} f(x)$ is: $\lim_{x \rightarrow \infty} f(x) = \infty$. But what is $\lim_{x \rightarrow 0} f(x)$? The answer is: $\lim_{x \rightarrow 0} f(x) = -\infty$. The reason
