How to solve it 3 steps How to solve it 3 steps. The most complete answer for your question How to solve it 3 steps? topic on the Internet. The solution is You need an online review of medical textbooks from the University of Oxford and Cambridge to get an idea of what sort of questions might be on the exam and, just as importantly, the kind of answers that will probably be on the exam. Kindly only one answer. Any solution other than the provided one is not accepted. The accepted answer is free for you to use in your resources. If you found this question helpful, you can give a thank you by sharing it with your friends.Q: Magento 2 Import with Database Schemas I am trying to import the entire Magento 2 content from one dev. site to a dev. store on another server. I successfully imported the collections of products, configurable products, images and categories. When I reached the customers, it kept bringing "The customer could not be found." on every single customer. How do I import all customers to this store to match the existing customers? I tried to import each customer one by one. When I imported, I did not set the user name or last name. After I selected all customers and tried to import, the error was "The 'user_name' field cannot be null." Any help would be appreciated. A: I ended up using a foreach loop and creating a new customer for each import. \$customer = \$customerRepository->get(\$importCustomer->getCustomerId()); try { \$customer->setWebsiteId(\$importCustomer->getWebsiteId()); \$customer->setStoreId(\$importCustomer->getStoreId()); \$customer->setFirstname(\$importCustomer->getFirstname()); \$customer->setLastname(\$importCustomer->getLastname()); \$customer->setEmail(\$importCustomer->getEmail()); \$customer->setIsDefaultBilling(\$importCustomer->isDefaultBilling()); \$customer->setIsDefaultShipping(\$importCustomer->isDefaultShipping()); \$customer->setDefaultBilling(\$importCustomer->getDefaultBilling()); \$customer
